08 **Quick Cheat Sheet**
All formulas in one place

01

Why prompt engineering changes everything

AI is not a mind reader. It does not know exactly what you want unless you clearly tell it. And that is the core difference between average and high quality results.

A prompt is simply everything you write to an AI - a question, task, description, or instruction. It sounds simple, but this is where the difference between a disappointing result and an outstanding one is created.

Analogy:

Imagine you are hiring a freelancer. If you simply say “write me a text,” you will get a text. But if you explain who you are, who the content is for, what tone you want, how long it should be, and what to avoid, you get exactly what you need.

5× better results with a detailed prompt	**A large number of users never use system prompts**	**A huge difference in output quality**

The three most common mistakes across all AI tools:

Too short prompt

AI does not have enough context to understand you properly. Add role, situation, and goal.

No defined role

AI does not know from which perspective it should respond.
Tell it who it is.

No format

You get a wall of text instead of a usable structure. Specify the output.

Why is prompt engineering a valuable skill?

We all have access to the same tools. The difference is not who has a better tool, but who knows how to communicate with it better. And that is a skill that can be learned.

Prompt engineering is not technical knowledge, it is a skill of clear communication applied to AI. And just like any communication skill, it can be learned, practiced, and improved.

This guide gives you concrete formulas, ready-made prompts, and examples for 10+ tools so you can immediately apply what you learn.

02

Anatomy of a perfect prompt

Five elements of a good prompt:

01 **ROLE - Tell the AI who it is**
e.g. copywriter, video editor, SEO specialist

02 **CONTEXT - Explain the situation**
who you are, what the goal is, who it is for

03 **TASK - Be precise about what you want**
what exactly is needed, how much, and for whom

04 **FORMAT - Define how you want the output**
bullet list, table, essay, script, JSON

05 **CONSTRAINTS - What must or must not be included**
forbidden words, tone, length, style

Master formula - copy and adapt

MASTER PROMPT FORMULA

```
You are a [ROLE] specialized in [AREA].

Context: [EXPLAIN THE SITUATION AND GOAL].

Task: [WHAT EXACTLY IS NEEDED, HOW MUCH, FOR WHOM].

Format: [HOW THE OUTPUT SHOULD LOOK].

Constraints: [WHAT MUST NOT BE INCLUDED / WHAT MUST BE
INCLUDED].
```

Example of a completed formula:

EXAMPLE

You are an experienced video editor specialized in short Reels for restaurants.

Context: I have a local restaurant in Zagreb, target audience is young people aged 20–35.

Task: Write 5 ideas for short videos for food delivery orders.

Format: Each idea must include a title (max 6 words) + short description (2 sentences) + hook.

Constraints: Do not use clichés like “fresh” or “high quality”. Tone: casual.

03

Differences in prompting by tool type

One of the most common beginner mistakes is using the same prompting approach across all AI tools. Every type of generator has its own logic and its own language it understands.

IMAGE GENERATORS

Tools: Midjourney, OpenArt, Stable Diffusion, Artta AI

Visual language. You describe the image as if you are directing both a photographer and an art director at the same time. Style, lighting, camera angle, and mood are just as important as the subject itself. A negative prompt is essential - specify what you do NOT want to see.

Subject - what or who is in the image and where

Style - photography, illustration, 3D, anime, oil painting

Lighting - golden hour, studio, neon, dramatic shadows

Mood - mysterious, luxurious, energetic, calm

Technical - 8K, sharp focus, professional photography

Camera angle - bird's eye, eye level, low angle, Dutch angle

Negative prompt - blur, watermark, text, distorted, low quality

EXAMPLE PROMPT

```
Close-up portrait of a woman in her 30s, golden hour
lighting,

shallow depth of field, film grain, Kodak Portra 400.

NEGATIVE: blur, watermark, text, artificial look.
```

VIDEO GENERATORS

Tools: Veo 3, Kling AI, Runway, Luma Dream Machine

Temporal language. You describe not only what we see, but also motion - camera movement, subjects, and time. Shot type, duration, and transitions are key. Physical realism comes from precisely describing the action.

Shot type - close-up, wide shot, aerial, POV, tracking shot

Subject + action - what is happening and how it moves

Camera movement - slow zoom in, pan left, static, handheld

Lighting + mood - cinematic, golden hour, neon night

Style - 4K cinematic, TikTok aesthetic, documentary

Duration - 5s / 8s / 15s - shorter means more control

EXAMPLE PROMPT

```
Cinematic tracking shot following a young woman walking
through

a rainy Tokyo street at night, neon reflections on wet
pavement,

slow handheld camera, 8s, 4K.
```

AUDIO GENERATORS

Tools: ElevenLabs, Murf AI, Suno, AIVA

Prosodic language. AI reads punctuation as instructions for pronunciation. You define voice, speed, emotion, and pauses. For music, you describe genre, instruments, BPM, and mood - not melody.

Voice - male/female, age, tone (warm, professional, excited)

Tempo - slow / normal / fast

Punctuation - comma = short pause, ellipsis = dramatic pause

Emphasis - exclamation mark = stress on that word

EXAMPLE PROMPT

```
[Voice: female, professional but warm, medium pace]

Welcome. Today we will... [pause] learn something

that will change how you work every day. [emphasis]

Every. Single. Day.
```

04

Consistent characters in video content

One of the biggest challenges in AI video production is consistency: a character that looks perfect in the first scene suddenly becomes a completely different person in the next. And this is not your mistake - it is simply how current models work. But there is a solution, and it is not complicated.

Why does the character change between scenes?

Text-to-video AI models do not remember visual identity between generations. Each new prompt is treated as a completely new video from scratch. No matter how precise your description is, the AI will still interpret the same text slightly differently every time.

Best solution: image-to-video workflow

Key principle: Instead of writing a text description of the character for every scene, generate a reference image of the character once (in an image generator) and use that image as an input frame for every video. This way the AI “sees” exactly how the character looks and does not have to imagine it from text.

1. **Generate a reference character image**
   In an image generator (Midjourney, OpenArt, Stable Diffusion), create a detailed portrait of your character. Save it as your master reference.
2. **Define a start and end frame for each scene**
   Each short video should have a start frame (initial image) and an end frame (final image). This ensures smooth transitions between clips and visual consistency.
3. **Use image-to-video inside the tool**
   Upload the start frame image as input into Kling AI, Runway, or Luma. The prompt describes the motion and scene while the model keeps the visual identity from the reference image.

4

Connect clips with matching frames

The end frame of the first video becomes the start frame of the next one. This way, a sequence of short clips can be stitched together into a natural, cohesive longer video.

PRO TIP

Always generate 4–6 reference images of the character from different angles (front, 3/4, profile) and in different lighting conditions. This gives you flexibility for different scenes without losing consistency.

Which tools are best for consistent characters?

Kling AI	Image-to-video with Face Consistency option. Excellent for real-life characters.	Test
Runway Gen-4	Character reference feature - upload a character image and reuse it across all scenes.	Test
Luma Dream Machine	Great physics and motion. Image-to-video workflow is reliable.	Test
Veo 3 (Google)	Most advanced model for video quality. Character consistency is still developing.	Test
OpenArt AI	For generating reference character images - consistent styles, character sheets.	Test

05

Detailed tool-by-tool guide

IMAGE & BRAND DESIGN AI

Lovart.ai

AI design studio for creating brand visuals and visual identities.

Test

Why prompting works differently here

Lovart understands brand context - you can give it a color palette, font preferences, and style, and it will generate consistent materials across an entire project. Unlike standard image generators, the focus here is on commercial use and brand consistency.

Brand visual for social media

PROMPT

```
Design a cohesive Instagram post for a premium coffee brand.

Brand identity: minimalist, warm.

Color palette: deep brown (#3C1E0A), cream (#F5ECD7), gold
accents.

Format: 1:1 square, 1080x1080px.

NEGATIVE: busy background, text overlay.
```

- [BRAND NAME] - your brand name
- [COLOR PALETTE] - brand color hex codes
- [STYLE] - minimalist / bold / playful / luxury

Logo and visual identity

PROMPT

```
Create a logo concept for [BRAND NAME] — [BUSINESS TYPE].

Values: [VALUE 1], [VALUE 2]

Target audience: [AUDIENCE DESCRIPTION]

Style: [wordmark / icon + wordmark].

Color mood: [COLORS OR FEELING]

Deliver: primary + icon + dark variant.
```

- [BRAND NAME] - company or brand name
- [BUSINESS TYPE] - wellness studio, tech startup, etc.
- [VALUES] - trust, innovation, etc.

PRO TIP

In Lovart, always define a brand board at the beginning of the project - color palette, fonts, and style references. Everything you generate afterward will stay consistent with that identity.

AI ASSISTANT & TEXT ANALYSIS

Claude (Anthropic)

Advanced AI assistant for writing and analysis - one of the most powerful language models.

Test

Why prompting works differently here

Claude is extremely good at following complex instructions, maintaining long conversational context, and producing precise writing. The system prompt is your secret weapon - you define the context once and Claude keeps it throughout the conversation.

System prompt for brand voice

PROMPT

```
For this entire conversation: you are the copywriter for my
brand [NAME]

Our voice is: [ADJECTIVES]

Target audience: [DESCRIPTION]

Avoid: [FORBIDDEN STYLE]

Format: always provide 3 variations A/B/C
```

Analysis and strategy

PROMPT

```
You are a senior marketing strategist with 15
years of experience in [INDUSTRY]
```

```
Analyze: [PASTE TEXT]

Give me: 1. Strengths and weaknesses

 2.Recommendations with priorities

 3.One quick win for this week
```

PRO TIP

Claude works best with clear roles and specific output formats. Always tell it HOW to structure the answer - do not let it decide the format on its own.

VIDEO GENERATION - MOST ADVANCED MODEL

Veo 3 (Google DeepMind)

Google's state-of-the-art video generator that can produce video from an image and also generate sound - dialogue, sound effects, and ambient audio.

Test

Why prompting works differently here

Veo 3 understands physics, lighting, and cinematic language better than any previous model. The key innovation is that you can include dialogue that characters speak directly in the video without post-production editing. Shot type and camera movement descriptions directly influence the output.

Cinematic product video

PROMPT

```
Cinematic close-up of [PRODUCT] on [SURFACE].

Camera: slow dolly-in.

Lighting: soft diffused morning light.

Atmosphere: [MOOD — premium/playful].

Sound: ambient [SOUND].

Duration: 8 seconds. Format: 16:9, 4K.
```

Dialogue scene

PROMPT

```
Scene: two professionals in office.

Character A (woman, 30s): says '[FIRST LINE OF DIALOGUE]'

Character B (man, 40s): responds '[DIALOGUE RESPONSE]'

Camera: medium two-shot. 12 seconds.
```

PRO TIP

Veo 3 responds especially well to film terminology: dolly shot, rack focus, Dutch angle, tracking shot. Use these terms and you will immediately get a more professional result.

AUDIO AI - TEXT-TO-SPEECH & VOICE CLONING

ElevenLabs

A leading platform for voice synthesis. It converts text into highly realistic speech in 35+ languages.

Test

Why prompting works differently here

ElevenLabs reads punctuation like a voice director. A comma is a short pause, a period is a normal pause, ellipses are a dramatic pause, and an exclamation mark indicates emphasis. It offers voice cloning, dubbing, and voice AI agents.

Podcast intro narration

PROMPT

```
[Voice: male, medium-deep, warm]

Good morning, and welcome to a new episode...

[pause] Today we are talking about a topic that...
```

Product advertisement (excited tone)

PROMPT

```
[Style: energetic, youthful, pace: fast]

Imagine having a personal assistant...

who never sleeps, never runs late,

and it always understands exactly what you need.
```

PRO TIP

ElevenLabs works best when you explicitly define style and tempo at the beginning of the text in square brackets. Punctuation is not decoration - it is your score.

AI IMAGE GENERATOR

Nanobanana

A platform for generating images with AI that turns short descriptions into visually powerful scenes.

Test

Why prompting works differently here

You do not describe an idea or message like with text-based AI tools, but exactly what you want to see in the frame. Every detail such as lighting, camera angle, and atmosphere directly affects the final result, so a more precise prompt leads to a better and more realistic image.

PROMPT

```
Subject: [main object or character]

Scene: [environment and background]

Style: [visual style - cinematic,
realistic, anime]

Lighting: [type of light - dramatic,
soft, neon]

Details: [additional elements, emotion,
textures, motion]

Camera: [shot - close-up, wide shot,
depth of field]

Quality: 4K, ultra detailed, sharp focus
```

PRO TIP

Combine unexpected elements (e.g. animal + extreme environment) + cinematic lighting + emotion (e.g. rage, power, calm) so the image has a “story” and higher viral potential.

06

Quick guide - Other tools

These tools are part of the WebAlati repository. For each tool we provide the category, a ready-made prompt example, and what kind of result you can expect.

VIDEO GENERATION

Kling AI

Test

Prompt:

```
Cinematic close-up of a coffee cup on a wooden table, morning
light streaming through the window, slow steam rising, shallow
depth of field, warm golden tones, 4K. Camera slowly zooms in.
Duration: 5s. Mood: calm.
```

Result:

High-quality 5-second cinematic video with natural steam movement and soft lighting - ready to publish without editing.

IMAGE GENERATION

OpenArt AI

Test

Prompt:

```
Minimalist skincare serum bottle on a marble surface with flower
petals. Style: commercial photography, high-end beauty brand.
Lighting: soft diffused window light. NEGATIVE: text, watermark,
blur, cluttered background.
```

Result:

Professional, studio-quality product photography - immediately usable for webshop, social media, or print materials.

AUDIO / VOICE

Murf AI

Test

Prompt:

```
[Voice: female, professional, medium pace] In this module you will
learn three key skills used by the top 1% of marketers. The first
skill... [pause 1s] is understanding real buyer psychology.
```

Result:

Natural voice narration with precise pauses - ideal for e-learning modules, video presentations, or explainer content. Sometimes instead of [female voice] you need to adjust settings directly inside the tool.

SOCIAL MEDIA MARKETING

Ocoya

Test

Prompt:

```
You are a brand copywriter for an urban audience aged 22-32.
Write an Instagram caption for the launch of a digital product
that solves [PROBLEM]. Tone: excited, human. Format: hook + 3
lines + CTA + 5 hashtags. Avoid clichés.
```

Result:

Ready-made Instagram caption with hook, body, and hashtags - ready for direct posting or easy customization.

SHORT-FORM VIDEO CONTENT

Syllaby

Test

Prompt:

```
Generate 7 TikTok video ideas on the topic [TOPIC] for an audience
interested in [INTEREST]. Format: title (hook question) + 3
content points + CTA. Each idea must have viral potential. No
repetition.
```

Result:

One week of content with clear video script structures - immediately usable for faceless or personal TikTok channels.

MUSIC - AUDIO - GENERATION

Suno AI

Test

Prompt:

```
Cinematic motivational trap song with deep bass and emotional
build-up. Theme about discipline, overcoming failure, and mental
strength. High energy, modern sound, 140 BPM, male vocal, intense
and inspiring mood.
```

Result:

AI generates a fully original song (beat + vocals + lyrics) based on a description of style, emotion, and theme. The output is a finished audio track ready to use in videos, ads, or content.

PROJECT MANAGEMENT / AI AGENTI

Test

Taskade

Prompt:

```
Create a detailed project plan for [PROJECT NAME]. Deadline:
[DATE]. Team: [NUMBER OF PEOPLE + ROLES]. Goal: [SPECIFIC
OUTCOME]. Format: project phases, tasks, owner, deadline,
dependencies. Include risk management with top 3 risks.
```

Result:

A complete project plan in tabular format ready for implementation - with clearly defined task owners and a fallback plan

Note: the plan is generated in the context of the Taskade platform, which is a comprehensive AI workspace with a wide range of features. In addition to project management, Taskade enables advanced workflow creation, AI agents that work 24/7, automation of repetitive tasks, and even the creation of simple CRM systems within the same environment. The platform combines multiple tools into a single interface, including tasks, documents, mind maps, and automations.

07

Advanced techniques

01 Chain Prompting

Break a complex task into steps. Each output becomes the input for the next prompt.

Step 1: “Write an outline.” → Step 2: “Based on the outline, write an intro.” → Step 3: “Write a conclusion that references the intro.”

02 Role + Audience Combo

The AI knows exactly who it is writing for and why.

You are a senior product manager writing for non-technical investors. Explain why our product is an opportunity they should not miss.

03 Few-Shot Prompting

Instead of long style explanations, give a concrete example: the AI immediately understands it.

"Write in the style of this paragraph: [example]. Now write the same for [new topic].”

04 Iteration > Perfect prompt

Do not spend 20 minutes perfecting the prompt. Build 80%, see the output, then refine it.

"This is good but too formal - rewrite it more casually and add a bit of humor at the end.”

05 Constraint Paradox

The more constraints you give, the more creative and focused the output becomes.

Max 50 words, must start with a verb, do not use the word “number” in the first sentence.

06 System Prompt

Set context once at the beginning of the conversation - the AI remembers everything that follows.

“For this entire conversation: you are my personal copywriter, we are writing for a HR brand, tone is always human and direct.”

Combination of techniques:

The strongest results come when you combine multiple techniques at the same time - System Prompt + Role + Audience Combo + Chain Prompting + Constraint Paradox. Start with one, then add the next when you feel comfortable.

08

Quick Cheat Sheet

All formulas in one place - save and print

IMAGE GENERATORS Formula

Subject + Style + Lighting + Mood + Technical + Negative

Subject - what/who/where

Style - photo / illustration / 3D / anime

Lighting - golden hour / studio / neon

Mood - calm / luxurious / energetic

Technical - 8K, sharp focus, detailed

Negative - blur, watermark, text, ugly

VIDEO GENERATORS Formula

Shot type + Subject + Action + Camera + Mood + Duration

Shot type — close-up / wide / aerial / POV

Camera movement — dolly / pan / static

Subject + action - what is happening

Lighting + mood — cinematic / neon / warm

Duration — 5s / 8s / 15s

Style — 4K cinematic / TikTok / documentary

AUDIO GENERATORS Formula

Voice + Style + Punctuation + Tempo + Emotion

Voice - male/female, age, tone

Tempo - slow / normal / fast

Comma - short pause

Ellipsis ... - dramatic pause

Exclamation mark ! - emphasis / stress on a word or phrase

For music - genre + BPM + instruments

MARKETING COPY Formula

Role + Audience + Problem/Desire + Format + Tone

Role - copywriter, strategist, journalist

Audience - age, interests, level of knowledge

Problem / Desire - what the customer struggles with or wants

Format — caption / thread / blog / email

Ton — human / professional / playful

CTA - what the reader should do

MASTER FORMULA - ALWAYS WORKS

```
You are a [ROLE] specialized in [AREA].

Context: [EXPLAIN THE SITUATION AND GOAL].

Task: [WHAT EXACTLY IS NEEDED, HOW MUCH, FOR
WHOM].
```

```
Format: [HOW THE OUTPUT SHOULD LOOK].

Constraints: [WHAT MUST NOT BE INCLUDED / WHAT MUST BE INCLUDED]
```

A prompt is your competitive advantage. A tool is just a tool.

In the WebTools newsletter, you get new prompts, AI tools, reviews, and practical examples directly in your inbox. No fluff, only what you can apply immediately. If you find this valuable, feel free to stay connected and keep an eye on future updates. It helps us continue creating this kind of content for you.
